

Nuclear Science

Merit Badge Workbook

This workbook can help you but you still need to read the merit badge pamphlet (book). No one can add or subtract from the Boy Scout Requirements #33216. Merit Badge Workbooks and much more are below: Online Resources.

Send comments to the workbook developer: craig@craiglincoln.com. Requirements revised: 2005, Workbook updated: May 2009.

Scout's Name: Counselor's Name: Counselor's Ph #: 1. Do the following: a. Describe the biological effects and hazards of radiation to humankind, the environment, and wildlife. Explain the difference between deterministic _____ and stochastic effects. In your explanation, discuss the nature and magnitude of radiation risks to humans from nuclear power, ______ medical radiation, _____ and background radiation. Explain the measures required by law to minimize these risks. b. Describe the radiation hazard symbol and explain where it should be used. Tell why and how people must use radiation or radioactive materials carefully. 2. Tell the meaning of the following:

ALARA, _____

Nuclear Science p. 2	Merit Badge Workbook	Scout's Name:	
alpha particle,			
atom.			
background radiation,			
beta particle,			
contamination			
gamma ray,			
- <u></u>			
half-life,			
ionization,			
quark,			
isotope,			
neutron,			
nuclear energy,			
nuclear reactor			
TIUCIEAI TEACIOI,			
narticle accelerator			
particle according			
rad and gray,			
- 3 - 7,			
radiation,			

Nuclear Science p. 3	Merit Badge Workbook	Scout's Name:
radioactivity,		
rem and sievert,		
and X-ray.		
,		
3. Choose five individuals imp	ortant to the field of atomic energy and nuclear sc	ience and explain each person's contribution.
4. Choose an element from	the periodic table.	
	atoms of three isotopes of this element, showing r	
and mass number.		
Then do the following:		

a. Make a drawing showing how nuclear fission happens, labeling all details.

Draw another picture showing how a chain reaction could be started and how it could be stopped.

b. Explain what is meant by a "critical mass."				
5. Do any THREE of the following:				
a. Build an electroscope. Show how it works. Place a radiation source inside and explain any difference seen				
b. Build a model of a reactor. Show the fuel, control rods, shielding, moderator, and any cooling material. Explain how a reactor could be used to change nuclear energy into electrical energy or make things radioactive.				
c. Using a radiation survey meter and a radioactive source, show how the measurements per minute change as the source gets closer to or farther from the radiation detector. Place three different kinds of materials between the source and the detector, then explain any differences in the measurements per minute. Explain how time, distance, and shielding can reduce the radiation dose				
d. Obtain a sample of irradiated and non-irradiated foods. Prepare the two foods and compare their taste and texture. Store the leftovers in separate containers and under the same conditions. For a period of 14 days, observe their rate of decomposition or spoilage, and describe the differences you see on days 5, 10, and 14				
e. Describe how radon is detected in homes.				
Discuss the steps taken for the long-term				

e unit, the unit operator, and

h. Visit a place where radioisotopes are being used. Using a drawing, explain how and why they are used.

Nuclear Science p. 7	Merit Badge Workbook	Scout's Name:
7. Find out about three career op	portunities in nuclear science that intere	st you. Pick one
and find out the education, training	ng, and experience required for this prof	ession and discuss this with your, counselor.
Tell why this profession interests	you
