

Exam : 74-132

Title : Designing Portal Solutions with MS ☐☐
SharePoint Products

Ver : 09-18-07

QUESTION 1:

You work as the network administrator at Certkiller .com. The Certkiller .com network consists of a single Active Directory domain named Certkiller .com. You are busy creating a portal solution that will integrate content managed by Microsoft Content Management Server 2002(MCMS). The CEO of Certkiller .com wants the portal solution to view the content seamlessly through the portal, giving the content the same appearance, whether it is managed by MCMS or managed by SharePoint Portal Server. The CEO wants the portal solution to perform full-text searches on the content managed by MCMS.

You then include the portal solution in Microsoft SharePoint Portal Server 2003. You need to include the appropriate features in the MCMS Connector for SharePoint Technologies in your solution.

What qualities should you include? (Choose all that apply.)

- A. Search features
- B. Web Author
- C. Direct Mailer
- D. MCMS Templates

Answer: A, D

QUESTION 2:

You work as the network technician at Certkiller .com. The Certkiller .com network consists of a single Active Directory domain named Certkiller .com.

Certkiller .com consists of a Research department. The department contains a search engine, which the users visit to get information. You are busy creating a portal solution that will integrate content managed by Microsoft Content Management Server 2002(MCMS).

The Certkiller .com administrators and site managers want the portal solution to track how frequently users view specific content. Your solution must also allow the administrators and site managers to track the number of users who visit each site and subsite. You need to provide the required portal-site analysis.

What should you do?

- A. Enable Web Author in MCMS, and select the Diagnostic settings.
- B. Enable Microsoft Windows SharePoint Services logging and usage analysis processing.
- C. Implement the Commerce Server Direct Mailer and Predictor resources on the Web servers.
- D. Create a Business Desk module that extends the management functionality.

Answer: B

QUESTION 3:

You work as the network technician at Certkiller .com. The Certkiller .com network consists of a single Active Directory domain named Certkiller .com.

Certkiller .com consists of a Research department. You are busy creating a Microsoft SharePoint Portal Server 2003 solution that will make use of the Microsoft Single Sign-On service to integrate the portal site with a third-party database system. In addition you want to enable the Single Sign-on service and create an enterprise application definition in your end solution.

You do not want the Certkiller .com users to use separate logon credentials. The portal site must be able to display data stored in the database system. You need to find a way to integrate the third-party database into the solution. What should you do?

- A. Use patch management and create topics based on the types of Web sites being displayed.
- B. Add a Page Viewer Web Part to display the Web site content.
- C. Create a Web Part that includes a managed group account that can access the third-party system.
- D. Create a Web Part that uses an enterprise application definition to access the third-party system.

Answer: D

QUESTION 4:

You work as the network technician at Certkiller .com. The Certkiller .com network consists of a single Active Directory domain named Certkiller .com.

Certkiller .com consists of a Research department. You create a Microsoft Commerce Server 2002 solution running on SharePortal Server 2003. This will be used to integrate catalog data from a SAP enterprise resource planning (ERP) database with the Commerce Server application database.

You then copy the SAP catalog data to the application by performing the download in batches. You must ensure that your actions or solutions do not disrupt the Commerce Server application for the users.

What should you do to integrate SAP into the portal solution?

- A. Verify that the passwords used for connecting are the same in the configuration set.
- B. Verify that the winbom.ini file includes the correct user name and password to access the share the Commerce Server application.
- C. Create an offline version of the catalog database to receive the SAP data and synchronize the database with the online catalog database.
- D. Enable SharePoint Portal Server gatherer logging, and select the Diagnostic settings.

Answer: C

QUESTION 5:

You work as the network technician at Certkiller .com. The Certkiller .com network consists of a single Active Directory domain named Certkiller .com.

Certkiller .com consists of a Research department. You are planning the development environment for a Microsoft Commerce Server 2002 (MCMS) solution. A new Certkiller .com security policy denies local administrator rights on client computers on the company domain. Users that are not in the Research department should be denied access to the research environment.

The users in the Research department must be able to perform their own debugging of Microsoft ASP.NET applications. You need to ensure that the users in the Research department are able to access resources on the company domain without being required to supply multiple credentials. In your solution you need to recommend the appropriate research environment.

What should you do? (Choose all that apply.)

- A. Do not create a Business Desk module that extends the management functionality.
- B. Create a stand-alone research domain that trusts the company domain.
- C. Create a custom Web Part to display the metadata of the documents as part of the company domain.
- D. Implement the research environment in the stand-alone research domain.
- E. Verify that the StartNet=yes parameter is included in the new domain.

Answer: B, D

QUESTION 6:

You work as the network technician at Certkiller .com. The Certkiller .com network consists of a single Active Directory domain named Certkiller .com.

Certkiller .com consists of a Research department. You create a portal solution built on Microsoft Content Management Server 2002 (MCMS) and Microsoft Commerce Server 2002. The result of must integrate functionality and workflow to support product editing through the Web site.

What should you do to integrate Commerce Server and MCMS to support product editing?

- A. Integrate by using the Data Server share name.
- B. Remove the username and password parameters in the PnPDrivers section by using Content Management Server 2002 Connector for SharePoint Technologies.
- C. Integrate by using Microsoft Solution for Internet Business 2.1.
- D. Integrate the Ad hoc team collaboration by using Integration Web Parts for MCMS and Commerce Server.

Answer: C

QUESTION 7:

You work as the network technician at Certkiller .com. The Certkiller .com network consists of a single Active Directory domain named Certkiller .com.

Certkiller .com consists of a Research department. The department contains a search engine, which the users visit to get information. You create a Microsoft Commerce Server 2002 solution that will allow the administrators and managers of Certkiller .com to analyze the behavior of users. They will also be able to check how much time they spend on a particular page and which links they used. You want the solution to use a suitable analysis tool.

What should you propose?

- A. Add custom workflow hooks to the Web.config file.
- B. Add a Page Viewer Web Part to display the Web site content.
- C. Enable Presentation Mode page processing in MCMS.
- D. Evaluate the analysis modules in Business Desk.

Answer: D

QUESTION 8:

You work as the network technician at Certkiller .com. The Certkiller .com network consists of a single Active Directory domain named Certkiller .com.

Certkiller .com consists of a Development department and a test environment. You are planning a Microsoft Commerce Server 2002 solution. You create an application and test it in the test environment.

After the application has been implemented in the test environment, you need to ensure that only the updated Content Repository assets in the development environment are used in the test environment. You need to recommend the appropriate development and implementation environment for the new solution. What should you do?

- A. Use the File and Settings Transfer Wizard to create database backups that can be copied to the test environment.
- B. Use the Microsoft CRM export customizations tool to export to the test environment.
- C. Use the File and Settings Transfer Wizard to import and export scripts that are based on the Microsoft Application Center 2000 API.
- D. Create import and export scripts that are based on the implementation application programming interface (API) for the MCMS Web site.

Answer: D

QUESTION 9:

You work as the network technician at Certkiller .com. The Certkiller .com network

consists of a single Active Directory domain named Certkiller .com.

Certkiller .com consists of a Research department. You create a portal solution that will integrate content from various Web sites within Certkiller .com. The Web sites are hosted on a variety of Web servers with third-party operating systems.

You want to achieve the following:

- * Create a portal site structure that organizes the Web sites.
- * Display the Web sites within WebParts.

You also want offer full-text searches of the content on the Web sites. You need to integrate the Web content into the portal areas.

Which should you do? (Choose all that apply.)

- A. Create areas based on the types of Web sites being displayed and create a separate content source for each Web site.
- B. Add e-mail notification triggers to the Global.asax file.
- C. Create a custom Web Part to display the metadata of the Web sites.
- D. Add a Page Viewer Web Part to display the Web site content.
- E. Use Microsoft Biztalk Server 2004 for content management and creation and add a Content Editor Web Part to display the Web site content.

Answer: A, D

QUESTION 10:

You work as the network administrator at Certkiller .com. The Certkiller .com network consists of a single Active Directory domain named Certkiller .com.

You create a portal solution that will integrate content managed by Microsoft Content Management Server 2002(MCMS). The CEO of Certkiller .com wants to allow users to perform full-text searches on the content managed by MCMS as well as to access documents stored in SharePoint document libraries from MCMS-managed Web pages.

You need to include the appropriate features in the MCMS Connector for SharePoint Technologies in your solution.

What qualities should you include? (Choose all that apply.)

- A. Web Author
- B. Search features
- C. Direct Mailer
- D. SharePoint library placeholder control

Answer: B, D

QUESTION 11:

You work as the network administrator at Certkiller .com. The Certkiller .com network consists of a single Active Directory domain named Certkiller .com.

You assess an existing portal solution for security deficiencies. You need to audit all

the components that include the portal solution as well as a list each Web Part installed on a virtual server. Thereafter, you need to report on all of the pages that contain an instance of each Web Part.

Which tool should you use need to analyze the Web Part usage in the existing portal solution?

- A. Run the Microsoft Application Analyzer.
- B. Run the Microsoft SharePoint Configuration Analyzer tool.
- C. Run the System Preparation tool (Sysprep) tool.
- D. Run the sysprep.exe with the required parameters in Windows SharePoint Services.

Answer: B

QUESTION 12:

You work as the network technician at Certkiller .com. The Certkiller .com network consists of a single Active Directory domain named Certkiller .com.

Certkiller .com consists of a Research department. You have received instructions to create a portal solution that integrates Microsoft Content Management Server 2002 (MCMS) with Microsoft SharePoint Portal Server 2003. Certkiller .com wants the solution to allow an authorized user to list the following items:

- * MCMS pages from a particular channel
- * Submitted pages waiting approval from that user
- * All MCMS Web unpublished pages that the user has authored.

What is the appropriate integration technology for your solution?

- A. Enable SharePoint Portal Server gatherer logging, and select the Diagnostic settings.
- B. Create document libraries in SharePoint Portal Server 2003.
- C. Install MCMS Web Parts in the Content Management Server 2002 Connector for SharePoint Technologies.
- D. Implement the Commerce Server components on a Network Load Balancing (NLB) cluster.

Answer: C

QUESTION 13:

You work as the network technician at Certkiller .com. The Certkiller .com network consists of a single Active Directory domain named Certkiller .com.

Certkiller .com consists of a Research department. You have received instructions to create a Microsoft Commerce Server 2002 solution. You want the administrators to use Microsoft Commerce Server Business Desk to configure, manage, and analyze the Commerce Server Web sites. The administrators need to make use of the Business Desk to perform custom management tasks.

What should you do to extend the functionality of the portal server to meet the requirements of the organization?

- A. Create a Business Desk module that extends the management functionality.
- B. Extend existing e-mail notification events by using workflow hooks.
- C. Create a custom Web Part to display the metadata of the documents.
- D. Modify the Business Desk Framework to support new pipelines that extend the management functionality.

Answer: A

QUESTION 14:

You work as the network technician at Certkiller .com. The Certkiller .com network consists of a single Active Directory domain named Certkiller .com.

Certkiller .com consists of a Research as well as a Development department. You have received instructions to design the development environment for a Microsoft Content Management Server 2002 (MCMS) solution. You want the environment to use Microsoft Visual SourceSafe 6.0, a shared Content Repository, and a shared integration server that supports multiple users. You also want the development manager to implement the solution in the test environment.

Which technologies must you installed on the developers computers? (Choose all that apply.)

- A. Content Editor Web Part.
- B. Content Management Server 2002 (MCMS).
- C. Content Management Server 2002 Site Stager.
- D. Microsoft Visual Studio .NET and Microsoft Visual SourceSafe 6.0 client components.
- E. Content Management Server 2002 Authoring Connector.

Answer: B, D

QUESTION 15:

You work as the network technician at Certkiller .com. The Certkiller .com network consists of a single Active Directory domain named Certkiller .com.

Certkiller .com consists of a Research department. You have received instructions to create a Microsoft Windows SharePoint Services solution. The objective of the solution is to allow users to view the identity of any user who is logged on to any SharePoint portal site.

You want to add functionality to Web pages. You want all portal site administrators to be able to make this functionality available to any portal sites that they manage.

What should you do to include the required functionality in the solution?

- A. Create a custom Web Part and add it to the virtual Server gallery.
- B. Implement the Commerce Server Direct Mailer.
- C. Document libraries in SharePoint Portal Server 2003.

D. SharePoint Team Services.

Answer: A

QUESTION 16:

You work as the network administrator at Certkiller .com. The Certkiller .com network consists of a single Active Directory domain named Certkiller .com. Certkiller .com consists of a Research and a Development department. You have received instructions to create a portal solution for team collaboration for an organization by using Microsoft Windows SharePoint Services. You would like to delegate the management of the site to users within the organization. You want to make sure that one member on each team is allowed to do the following:

- * Add Items
- * Add/Remove Private Web Parts
- * Delete Items
- * Edit Items
- * Manage Lists and
- * Cancel Check-Outs.

For this option you plan to make use of one of the default Windows SharePoint Services site groups to assign these actions to the team members. You also want to assign the default group with the minimal rights required to perform the actions. Which group should you select to specify the appropriate default site group to which the team members will belong?

- A. User
- B. Member
- C. Guest
- D. Web Designer

Answer: D

QUESTION 17:

You work as the network administrator at Certkiller .com. The Certkiller .com network consists of a single Active Directory domain named Certkiller .com. Certkiller .com consists of a Research and a Development department. You have received instructions to create a Microsoft Commerce Server 2002 solution. You want the solution to protect the Web and database servers from internal and external intruders and against threats on the Internet.

Which action should you take to provide the highest level of security for the new solution?

- A. Configure Microsoft SQL Server to use SQL authentication and configure firewall filters and rules to create perimeter networks.

- B. Configure Commerce Server to use Windows Integrated Security and configure firewall filters and rules to create perimeter networks.
- C. Configure Windows authentication for global resources and firewall filters and rules to create perimeter networks.
- D. Configure Commerce Server to use Windows Integrated Security and Commerce Server applications to authenticate in SQL Server by using the SQL Server system administrator (SA) account.

Answer: B

QUESTION 18:

You work as the network administrator at Certkiller .com. The Certkiller .com network consists of a single Active Directory domain named Certkiller .com. Certkiller .com consists of a Research and a Development department. You have received instructions to create an extranet portal solution. You want to ensure that all data sent between users and the portal is encrypted by using Secure Sockets Layer (SSL).

In order to do this you need to configure the portal site to encrypt all data by using SSL. To do this, you obtained a server certificate from a certificate authority. What should you do next? (Choose all that apply.)

- A. Obtain a client certificate from a certificate authority.
- B. Install ISA 2000 on the portal servers.
- C. Install SharePoint Team Services.
- D. Configure the virtual server to require SSL.
- E. Install the Business Desk module.

Answer: A, D

QUESTION 19:

You work as the network technician at Certkiller .com. The Certkiller .com network consists of a single Active Directory domain named Certkiller .com.

Certkiller .com consists of a Research and a Development department. A Certkiller .com customer named Andy Reid has contacted you. Andy Reid requests that you create a Microsoft SharePoint Portal Server 2003 solution that needs to be implemented in their three Web farms.

One farm is configured as a parent server farm and the other two as child server farms. Andy Reid wants the solution to protect the Web farms from internal and external intruders.

What should you do to maximize the security of the solution?

- A. Install Microsoft Baseline Security Analyzer on the two perimeter networks.
- B. Install Microsoft Application Analyzer on the two perimeter network.
- C. Install all three Web farms in the same perimeter network.

D. Run the Environmental Diagnostic Wizard in a separate perimeter network.

Answer: C

QUESTION 20:

You work as the network technician at Certkiller .com. The Certkiller .com network consists of a single Active Directory domain named Certkiller .com.

Certkiller .com consists of a Research department. You have received instructions to plan the authentication architecture for a Microsoft SharePoint Portal Server 2003 solution. The SharePoint sites are used by the Certkiller .com customers of an Internet service provider (ISP). The SharePoint Portal Server makes use of Microsoft Active Directory for account management.

Certkiller .com wants its users to be able to register themselves on the SharePoint site and their accounts must be created based only on the users e-mail addresses.

What should you do to implement the appropriate authentication method for the solution?

A. Configure the Trace Report utility in Microsoft Windows Server 2003 to trace World Wide Web Publishing Service usage patterns.

B. Implement the Commerce Server components on a Network Load Balancing (NLB) cluster.

C. Install Content Management Server 2002 Authoring Connector on the client computers.

D. Configure Microsoft Windows SharePoint Services with the Active Directory account mode when Windows SharePoint Services is installed.

Answer: D

QUESTION 21:

You work as the network technician at Certkiller .com. The Certkiller .com network consists of a single Active Directory domain named Certkiller .com.

Certkiller .com consists of a Research and a Development department. You have received instructions to create an Internet-facing portal solution by using Microsoft Office SharePoint Portal Server 2003. The reason for this is to protect the portal solution from malicious Internet users by using Microsoft Internet Security and Acceleration Server (ISA) 2000.

You want to use the Secure Sockets Layer (SSL) bridging and link translation to grant access the portal solution. You need to determine how you can allow access to the portal solution through ISA 2000.

What should you do?

A. Specify the Content Editor Web Part not to display the Web site content.

B. Specify the Web Part not to display the metadata of the documents.

C. Configure Web Publishing rules on the server running ISA 2000.

D. Configure the Log Manager utility in Windows Server 2003 to log Internet Information Services (IIS) activity.

Answer: C

QUESTION 22:

You work as the network administrator at Certkiller .com. The Certkiller .com network consists of a single Active Directory domain named Certkiller .com. Certkiller .com consists of a Research and a Development department. You have given instructions for the research department to create a portal solution by making use of Microsoft Windows SharePoint Services. You want to allow users to register themselves for access to the portal site.

Which authentication method should the Research team use to allow users to self-register for portal access?

- A. Configure the portal site to use Microsoft Baseline Security Analyzer.
- B. Configure the portal site to display the Supplemental App. login password.
- C. Configure the portal server to use the Environmental Diagnostic Wizard in a workgroup.
- D. Configure the portal server to be a member of a Microsoft Active Directory domain.

Answer: D

QUESTION 23:

You work as the network technician at Certkiller .com. The Certkiller .com network consists of a single Active Directory domain named Certkiller .com.

Certkiller .com consists of a Research and a Development department. You have received instructions to plan a Microsoft SharePoint Portal Server 2003 solution. Certkiller .com wants the users to search, view, and browse content on SharePoint sites. However, the users should not be allowed to submit listings or create personal Web sites.

What should you do to grant access to the SharePoint sites?

- A. Assign the Contributor group to the SharePoint sites.
- B. Assign the Web Designer group to the SharePoint sites.
- C. Add the users to the Reader group.
- D. Add the Guest to the Member group.

Answer: C

QUESTION 24:

You work as the network technician at Certkiller .com. The Certkiller .com network consists of a single Active Directory domain named Certkiller .com.

Certkiller .com consists of a Research and a Development department. You have received instructions to create authentication architecture for a Microsoft Content Management Server 2002 (MCMS) intranet solution running on SharePoint Portal Server 2003.

All the users in Certkiller .com have Microsoft Active Directory directory service accounts, and direct access to the Web servers. Credentials need to be verified before users are able to access any part of the portal site.

What authentication method can be used?

- A. Integrated Windows Authentication.
- B. Basic Authentication.
- C. Digest Authentication.
- D. Certificate Authentication.

Answer: A

QUESTION 25:

You work as the network technician at Certkiller .com. The Certkiller .com network consists of a single Active Directory domain named Certkiller .com.

Certkiller .com consists of a Research and a Development department. Certkiller .com is using SharePoint Portal Server 2001 for document approval workflow within each team. You have received instructions from the CEO to create a new team-collaboration solution that is based on SharePoint Portal Server 2003. You need to provide the same document approval workflow as the existing SharePoint Portal Server 2001 solution.

What should you recommend?

- A. Create a new database in Active Directory.
- B. Create SharePoint Portal Server 2003 backward-compatible document libraries.
- C. Remove lines in PnPDrivers section to only include \\opktools\drivers = drivers.
- D. Modify the Content Selection Framework to support the new Business Desk management functionality.

Answer: B

QUESTION 26:

You work as the network technician at Certkiller .com. The Certkiller .com network consists of a single Active Directory domain named Certkiller .com.

Certkiller .com consists of a Research and a Development department. You have received instructions to create a design for a portal solution running on SharePoint Portal Server 2003. The portal server of Certkiller .com is set to crawl the Web content. You want to crawl content only on specific Web sites within the organization.

What should you do to configure the portal solution to search for content by

crawling the content on the appropriate Web sites?

- A. Document libraries and set the portal server to crawl content on the specific Web sites by adding a link for each instance of Web site.
- B. Implement the Commerce Server Direct Mailer and Predictor resources on the Web servers.
- C. Run the System Preparation tool (Sysprep) and create a new content source and configure the source to crawl content on the specific Web sites.
- D. Create a new content source for each instance of Web sites and configure the content source to crawl content on a specific Web site.

Answer: D

QUESTION 27:

You work as the network technician at Certkiller .com. The Certkiller .com network consists of a single Active Directory domain named Certkiller .com.

Certkiller .com consists of a Research and a Development department. You have received instructions to create a publishing workflow for a Microsoft Content Management Server 2002 (MCMS) solution. You need to extend the workflow to include e-mail notifications that advise reviewers of events that occur during the approval process.

Which should you do to use a workflow method that provides a complete solution?

- A. Add Microsoft Application Analyzer to the Web.config file.
- B. Add Microsoft Office InfoPath to the Global.asax file.
- C. Extend the publishing workflow by using publishing events.
- D. Extend the Exchange Task Wizard by using workflow hooks.

Answer: C

QUESTION 28:

You work as the network technician at Certkiller .com. The Certkiller .com network consists of a single Active Directory domain named Certkiller .com.

Certkiller .com consists of a Research and a Development department. You have received instructions to create a Microsoft SharePoint Portal Server 2003 solution.

The creation must allow the users to search the SharePoint sites, Microsoft Exchange Server public folders, shared folders on the network as well as other Web sites. However, the folders on the Exchange Server require different access credentials from the other content sources.

You need to connect the different types of data sources. You then configure a content access account for the Exchange Server public folder counter sources. What should you do next?

- A. Configure all content courses to use the default content access account.

- B. Use the CryptoAPI tools to configure all content courses to use the default content access account.
- C. Use the WaitForPnP=No to extend the publishing workflow by using publishing events.
- D. Configure a path rule for the folders in the Exchange Server.

Answer: A

QUESTION 29:

You work as the network technician at Certkiller .com. The Certkiller .com network consists of a single Active Directory domain named Certkiller .com. Certkiller .com consists of a Research and a Development department. You have received instructions to create a Microsoft Office SharePoint Portal Server 2003 solution that provides employees with company-related information. The end result must target content at specific groups of Certkiller .com employees, based on the directory service groups in Microsoft Active Directory to which the employees belong. Thereafter you plan to create a SharePoint audience for every group. What should you do to target content to the employees in your solution?

- A. Audience targeting in SharePoint Portal Server 2003.
- B. Configure factory.exe to link the audiences to the Active Directory groups.
- C. Create custom workflow hooks to the Web.config file that define the content available to the audiences.
- D. Create audience rules in SharePoint Portal Server that define the members of each Audience class.

Answer: D

QUESTION 30:

You work as the network technician at Certkiller .com. The Certkiller .com network consists of a single Active Directory domain named Certkiller .com. Certkiller .com consists of a Development department. You have received instructions to plan the publishing workflow for a Microsoft Content Management Server (MCMS) 2002 solution. Certkiller .com wants the developers to create ASP and ASP.NET templates. Thereafter you need to add the contents to the templates and save the changes. You want the workflow to follow the complete MCMS publishing process. However, one channel must allow publishing pages directly without editor and moderator approval. What should you do to ensure that the workflow method provides a complete solution?

- A. Assign only an author to the channel.

- B. Assign only a moderator to the channel.
- C. Create a members group, and configure the group as an author and as a moderator.
- D. Create a guest group, and configure the group as an editor and as a moderator.

Answer: A

QUESTION 31:

You work as the network technician at Certkiller .com. The Certkiller .com network consists of a single Active Directory domain named Certkiller .com. Certkiller .com consists of a Research and a Development department. Certkiller .com consists of a remote site that makes use of a Web service that provides content to the other sites of Certkiller .com. You have received instructions to create a Microsoft Content Management Server 2002 (MCMS) solution.

You want some of the content of the MCMS Web sites to exist on a remote Web site. You also want the MCMS Web sites to automatically display the most current data from the remote Web site on every applicable posting.

What should you do to connect to and display this content?

- A. Add e-mail notification triggers to the Global.asax file.
- B. Add a Content Editor Web Part to display the Web site content.
- C. Write a custom placeholder that consumes the remote Web service.
- D. Create a separate content source for each Web site.

Answer: C

QUESTION 32:

You work as the network technician at Certkiller .com. The Certkiller .com network consists of a single Active Directory domain named Certkiller .com.

Certkiller .com consists of a Development department and a Sales department. You have received instructions to create a design for a solution based on Microsoft SharePoint Portal Server 2003. Certkiller .com wants all its users to be able to locate Microsoft InfoPath documents by making use of extended metadata within the documents. You need to create a design that lets users locate documents by using metadata within documents.

What should you do?

- A. Enable Presentation Mode page processing in MCMS.
- B. Create a document library to store the documents and a custom view to display the metadata of the documents.
- C. Implement Microsoft SQL Server 2000 on a shared-all to display the metadata of the documents.
- D. Use Content Selection Framework to add a content source for the documents.

Answer: B

QUESTION 33:

You work as the network technician at Certkiller .com. The Certkiller .com network consists of a single Active Directory domain named Certkiller .com.

Certkiller .com consists of a Development department and a Sales department. You have received instructions to create a portal solution by using Microsoft SharePoint Portal Server 2003. You want to search content that is dynamically generated by an ASP Web page that is connected to a database.

Which should you do to configure the portal solution to search the content that is generated by the ASP Web page?

- A. Configure Network Monitor to displays the content of the ASP Web page.
- B. Configure SQL Server Agent to displays the content of the ASP Web page.
- C. Allow crawling of Web site content by the SharePoint server and configure the portal site Crawl Configuration to Follow complex URLs.
- D. Allow SharePoint Team Services to run on the SharePoint server.

Answer: C

QUESTION 34:

You work as the network technician at Certkiller .com. The Certkiller .com network consists of a single Active Directory domain named Certkiller .com.

Certkiller .com consists of a Research and a Development department. You have been contacted by a Certkiller .com customer. Mia Hamm wants you to create a Microsoft Office SharePoint Portal Server 2003 solution for the Finance department of their organization. The employees of Mia Hamm are assigned job roles that are stored as attributes in Microsoft Active Directory service. Mia Hamm wants the administrators to be able to target content to employees based on their roles.

You need to ensure that the content can be targeted to the appropriate employees.

Thereafter you can create an audience for every job rule.

What should you do next?

- A. Target the content to the specific area.
- B. Enable SharePoint Portal Server gatherer logging and target the content to the specific area.
- C. Create a custom view to display the content to the specific area.
- D. Create one content source for all Web sites.

Answer: A

QUESTION 35:

You work as the network technician at Certkiller .com. The Certkiller .com network consists of a single Active Directory domain named Certkiller .com.

Certkiller .com consists of a Development department and a Sales department. You have received instructions to plan a portal solution that provides employees with an intranet interface that connects to a computer running Siebel software.

Certkiller .com wants the solution to support content and business service aggregation. Certkiller .com also wants to allow users to access the Siebel software, but does not want them to provide their credentials multiple times. You then implement the solution on Microsoft Content Management Server 2002.

What should you do next to implement a portal solution that meets the requirements?

- A. Implement the solution on Content Management Server 2002.
- B. Implement the solution on Microsoft SQL Server 2000.
- C. Create Web Parts that enable communication between the portal site and the Siebel system.
- D. Define a path rule for the Exchange server folders.

Answer: C

QUESTION 36:

You work as the network technician at Certkiller .com. The Certkiller .com network consists of a single Active Directory domain named Certkiller .com.

Certkiller .com consists of a Development department and an Advertisement department. You have received instructions to create a solution based on Microsoft Office SharePoint Portal Server 2003. Certkiller .com wants the solution to provide the users in the Advertisement department with access to research resource information on an intranet Web site.

Certkiller .com wants the users to be able to create, publish, and manage Web content postings directly from within the portal and to personalize their employee information.

What should you recommend?

- A. Microsoft BizTalk Server 2002 and Content Management Server 2002 Connector for SharePoint Technologies.
- B. Microsoft Commerce Server 2002 and Content Management Server 2002 Connector for SharePoint Technologies.
- C. Microsoft Content Management Server 2002 and Content Management Server 2002 Connector for SharePoint Technologies.
- D. Microsoft Solution for Internet Business 2.1 and Content Management Server 2002 Connector for SharePoint Technologies.

Answer: C

QUESTION 37:

You work as the network technician at Certkiller .com. The Certkiller .com network

consists of a single Active Directory domain named Certkiller .com. Certkiller .com consists of a Development department and a Sales department. You have received instructions to create a Microsoft Content Management Server 2002 (MCMS) solution that supports a business-to-business portal. Certkiller .com wants the solution to authorized business partners to display syndicated content from the portal Web site on their Web sites.

What should you do to create a portal solution that meets the requirements?

- A. Use Site Manager in MCMS to create an export script that provides the content on the portal Web site to the partners.
- B. Create a Web service that provides partners with access to the content on the portal Web site.
- C. Extend the ASP applications to consume the partners Web services.
- D. Extend the Page Viewer Web Part to allow partners to use content from the portal Web site.

Answer: B

QUESTION 38:

You work as the network technician at Certkiller .com. The Certkiller .com network consists of a single Active Directory domain named Certkiller .com. Certkiller .com consists of a Development department as well as a Sales department. You have received instructions to plan a solution that manages partner relationships. Certkiller .com wants the solution to allow employees to collaborate with partners on important documentation. The employees and partners must be able to check documents in and out, create shared workspaces as well as search their own Web sites.

The Certkiller .com manager wants the solution to support catalog management, basket functionality, payment processing, feedback mechanisms and analytical capabilities. You implement Microsoft Windows Office SharePoint Services. What should you do next?

- A. Implement Microsoft Commerce Server 2002.
- B. Implement MS BDD Deployment Interview wizard.
- C. Implement SharePoint Team Services.
- D. Implement the Log Manager utility.

Answer: A

QUESTION 39:

You work as the network technician at Certkiller .com. The Certkiller .com network consists of a single Active Directory domain named Certkiller .com. Certkiller .com consists of a Development department and a Marketing department. You have received instructions to create a Microsoft Content Management Server

2002 (MCMS) intranet solution.

The Certkiller .com users that use the portal site use client computers that are configured to run Microsoft Office Word 2003.

Certkiller .com wants the users to be able to use Word to submit entire documents and to select content in a document as a new Web page for the portal site. You need a method for integrating Word 2003 with the intranet solution.

What should you do?

- A. Enable SharePoint Portal Server gatherer logging on the client computers.
- B. Add e-mail notification triggers on the client computers.
- C. Install Content Selection Framework on the client computers.
- D. Install Content Management Server 2002 Authoring Connector on the client computers.

Answer: D

QUESTION 40:

You work as the network technician at Certkiller .com. The Certkiller .com network consists of a single Active Directory domain named Certkiller .com.

Certkiller .com consists of a Development department and a Marketing department.

You have received instructions to create a portal solution for Certkiller .com. The portal solution must include both static and dynamic content.

You need to create a topic and area hierarchy that requires minimal administration during the life cycle of the portal solution. You create top-level areas based on content that is more static. Thereafter, you create a sub area based on content that is more dynamic.

What should you do next?

- A. Create a top-level topics based on content that is more static and subtopics based on content that is more dynamic.
- B. Create a top-level topics based on content that is more static and dynamic.
- C. Create a top-level topics based on content that is more dynamic and subtopics based on content that is more dynamic.
- D. Create a top-level topics based on content that is more dynamic and subtopics based on content that is more static.

Answer: A

QUESTION 41:

You work as the network technician at Certkiller .com. The Certkiller .com network consists of a single Active Directory domain named Certkiller .com. Certkiller .com consists of an existing portal farm that contains two front-end servers that is configured to run Microsoft Office SharePoint Portal Server 2003 as well as three database servers running Microsoft SQL Server 2000.

The Certkiller .com users who access the configuration are sometimes unable to access content on the portal site and are able to access the content later. During the investigation, you see that the majority of the outages occur when content is being crawled.

What should you do to improve the availability of the solution?

- A. Configure the portal site Crawl Configuration to Apply to the portal farm.
- B. Add one or more index servers to the portal farm.
- C. Configure the portal site Crawl Configuration to Follow to the portal farm.
- D. Allow crawling of Web site content by the SharePoint server.

Answer: B

QUESTION 42:

You work as the network technician at Certkiller .com. The Certkiller .com network consists of a single Active Directory domain named Certkiller .com.

Certkiller .com consists of a Development department and a Marketing department.

You have received instructions to create storage architecture for a Microsoft Commerce Server 2002 solution that uses the Direct Mailer service to generate personalized messages.

Certkiller .com wants the Commerce Server application on the Web site to be implemented on the Web farm. The Direct Mailer service and the Microsoft SQL Server 2000 databases that support Commerce Server must remain highly available to the Commerce Server application.

What is recommend for the improving the availability of the solution?

- A. Install Direct Mailer on the Web farm and SQL Server on a server cluster.
- B. Install Direct Mailer on a server cluster and SQL Server on a server cluster.
- C. Install SQL Server on the Web farm and Direct Mailer on a server cluster.
- D. Install SQL Server on the server running Commerce Server Direct Mailer on a server cluster.

Answer: B

QUESTION 43:

You work as the network technician at Certkiller .com. The Certkiller .com network consists of a single Active Directory domain named Certkiller .com.

Certkiller .com consists of a Development department and a Marketing department.

You have received instructions to create a Microsoft Commerce Server 2002 solution for an organization. You plan that the data will be stored in Microsoft SQL Server 2000 clusters.

Certkiller .com expects that the portal site traffic will to exceed 20 million simultaneous users of SQL Server. Your solution must be able to scale during periods of high traffic in order for users to access profile data. You need to design a

solution that can scale to meet or exceed the requirements.
What should you do?

- A. Add custom workflow hooks for each data source.
- B. Extend the publishing workflow by using publishing events.
- C. Create a form library for each instance of SQL Server.
- D. Use data-source partitioning for each data source.

Answer: D

QUESTION 44:

You work as the network technician at Certkiller .com. The Certkiller .com network consists of a single Active Directory domain named Certkiller .com. Certkiller .com consists of a Development department and a Marketing department. You have received instructions to create a portal solution for a large portal farm. Certkiller .com has purchased eight servers for the portal solution. You want to assign the server in the server roles as a Front-end server running Microsoft SharePoint Portal Server 2003, Index server running Microsoft Indexing Service, Search server running Microsoft SharePoint Portal Server Search and a Database server running Microsoft SQL Server 2000 in a cluster. You decide to assign three front-end servers and two database server. What is still needed?

- A. Two search servers and one index server.
- B. Two search servers and one index server.
- C. One index server and a Microsoft Baseline Security Analyzer on a search server.
- D. One search servers and one index server.

Answer: B

QUESTION 45:

You work as the network technician at Certkiller .com. The Certkiller .com network consists of a single Active Directory domain named Certkiller .com. Certkiller .com is accessed by users through the portal solution. Certkiller .com consists of a Development department and a Research department. Both Internet-based and intranet-based users will access the portal. You have been contacted by a Certkiller .com customer. Andy Reid wants you to create a Microsoft Office SharePoint Portal Server 2003 solution for his organization that is divided into two divisions. Andy Reid wants all portal sites in the solution to use Integrated Windows Authentication to authenticate users. He also wants every division to be able to manage its own Web Part and template galleries, manage its own Web discussions and alerts as well as configure the settings for all of its own portal sites. What should you advise?

- A. Create a Web farm for every division within the site collection.
- B. Create a server cluster spans the site collections.
- C. Create one virtual server for both divisions. Create one site collection for each division within the virtual server.
- D. Create a Web farm for every division. Create one site collection that spans the virtual servers.

Answer: C

QUESTION 46:

You work as the network technician at Certkiller .com. The Certkiller .com network consists of a single Active Directory domain named Certkiller .com. Certkiller .com consists of a Development department and a Marketing department. You have received instructions to create a portal farm solution that uses SharePoint Portal Server 2003. Certkiller .com wants the SharePoint content and the databases to support the portal farm. How should you store the content and configuration databases while minimizing costs?

- A. Use the CryptoAPI tools to support the portal farm.
- B. Implement Windows Small Business Server 2003 on every server in the portal farm.
- C. Implement Microsoft SQL Server 2000 on a dedicated server to support the portal farm.
- D. Implement SharePoint Portal Server on every server in the portal farm.

Answer: C

QUESTION 47:

You work as the network technician at Certkiller .com. The Certkiller .com network consists of a single Active Directory domain named Certkiller .com. Certkiller .com consists of a Development department and a Research department. You have received instructions to create a Microsoft SharePoint Portal Server 2003 solution. The users in the Development department work directly in Microsoft Office Access 2003 databases. The data in a table in one of the databases must be synchronized with the data in a list on the portal site. You need to ensure that the data in the list in the portal site is synchronized with one of the databases. What should you do?

- A. Create an OU and place the users and data in the OU on a separate computer that links to the Access table and to the SharePoint Portal Server list.
- B. Create Microsoft CRM user account that retrieves the data from the Access database.
- C. Create a linked table in Access that links to the list in the portal site.
- D. Create a customized Web Part in the portal site that links the list to the table in

Access.

Answer: C

QUESTION 48:

You work as the network technician at Certkiller .com. The Certkiller .com network consists of a single Active Directory domain named Certkiller .com. Certkiller .com consists of a Sales department and a Research department. You have received instructions to create a storage architecture design for a Microsoft Commerce Server 2002 solution. Certkiller .com wants the User profile data to be partitioned across three Microsoft SQL Server 2000 databases. The databases must support data source partitioning. You need to design the storage architecture for your solution.

What should you do?

- A. Configure the SiteMap to map to the three databases.
- B. Ensure that the table definitions for the user profile data in the three databases are identical.
- C. Configure the Trace Report utility in Microsoft Windows Server 2000 to support data source partitioning.
- D. Configure the Web servers to include properties for the three databases.

Answer: B

QUESTION 49:

You work as the network technician at Certkiller .com. The Certkiller .com network consists of a single Active Directory domain named Certkiller .com. Certkiller .com consists of a Sales department and a Research department. You have received instructions to create a portal solution that supports customers over the Internet. Certkiller .com wants the solution to support 2,000 users at the same time. The customer support representatives need to search through large quantities of support content to resolve user problems. The representatives must be able to find new content as soon as it is published in the portal solution. To scale the requirements of the solution you implement two MS SharePoint Portal Server 2003 Servers and two MS SQL Server 2000 Servers.

What should you do next?

- A. Implement two servers to run the Index service and configure one of the servers that run the Index service to run the Job Server role.
- B. Add a Content Editor Web Part to run the Index service.
- C. Install Content Management Server 2002 Site Stager and configure a server to run the Job Server role.
- D. Install Content Management Server 2002 Site Stager and configure a server to run the Index service.

Answer: A

QUESTION 50:

You work as the network technician at Certkiller .com. The Certkiller .com network consists of a single Active Directory domain named Certkiller .com.

Certkiller .com consists of a Sales department and a Research department. You have received instructions to create a Microsoft Windows SharePoint Services solution. The Microsoft Windows SharePoint Services solution will be implemented on a front-end Web farm.

You plan to store the SharePoint content in a back-end Microsoft SQL Server database. The managers of Certkiller .com want the SharePoint applications available at all times. You need to recommend a solution to improve the availability of the application.

Which action should you recommend?

A. Provide higher availability for the servers running SQL Server by using Microsoft Cluster Service and servers in the Web farm by using Component Load Balancing.

B. Provide higher availability for the servers running SQL Server by using Microsoft Cluster Service and servers in the Web farm by using Network Load Balancing (NLB).

C. Install Content Management Server 2002 Authoring Connector for the servers in the Web farm by using Microsoft Cluster Service.

D. Provide higher availability for the servers in the Web farm by using Microsoft Cluster Service and the SQL servers running Component Load Balancing.

Answer: B

QUESTION 51:

You work as the network technician at Certkiller .com. The Certkiller .com network consists of a single Active Directory domain named Certkiller .com.

Certkiller .com consists of a Sales department and a Research department. You have received instructions to create a Microsoft Commerce Server 2002 solution. The Microsoft Commerce Server 2002 solution needs to be implemented in a multi-tiered environment. You are going to put the Web servers that host the site, in the presentation tier. Microsoft SQL Server 2000 is used to store data required by Commerce Server in the data tier. You need the solution must provide optimal scalability.

What should you do?

A. Implement the Commerce Server Direct Mailer and Predictor resources on the Web servers.

B. Implement Microsoft SQL Server 2000 on a shared-nothing cluster in the data tier and implement the Commerce Server components on a Network Load Balancing (NLB)

cluster.

C. Configure the Web servers to use workflow hooks that support Commerce Server components.

D. Configure the Presentation Mode page processing in MCMS to access the Commerce Server database for each content request.

Answer: B

QUESTION 52:

You work as the network technician at Certkiller .com. The Certkiller .com network consists of a single Active Directory domain named Certkiller .com.

Certkiller .com consists of a Sales department. You have received instructions to create a business process portal solution for the Sales department. The

Certkiller .com Sales department produces a large numbers of sales every day.

Therefore, the users need to create thousands of documents for publication ever day of their new stock that is for sale.

Before each document is published it has to through a complex approval process.

The users must be able to store, view and revise documents in order for them to collaborate with each other. The approval process needs to work in conjunction with the document storage solution.

What technologies should you recommend?

A. Provide complex business rules processing by using Content Management Server 2002 Site Stager.

B. Use Microsoft BizTalk Server 2004 to provide complex business rules and Microsoft Office SharePoint Portal Server document libraries to provide document storage.

C. Provide document storage by using Content Selection Framework to access the Commerce Server database.

D. Provide document collaboration by using Microsoft SQL Server 2000.

E. Provide document collaboration by using Content Management Server 2002 Authoring Connector.

Answer: B

QUESTION 53:

You work as the network technician at Certkiller .com. The Certkiller .com network consists of a single Active Directory domain named Certkiller .com.

Certkiller .com consists of a Sales department and a Research department. You have received instructions to create an e-commerce solution to support a

business-to-consumer portal. Certkiller .com wants the solution to integrate personalization, targeting, data warehousing and e-commerce transactional services into the portal site. They also want the solution to integrate an automated publishing process.

This process must support scheduling, version control, customizable workflow,

browser-based publishing and archiving. You then install the Microsoft Commerce Server 2002 and Microsoft Content Management Server 2002 technologies. What is still needed?

- A. Install Microsoft Solution for Internet Business 2.1.
- B. Install Microsoft BizTalk Server 2004.
- C. Install Microsoft SQL Server 2000.
- D. Install Content Management Server 2002 Site Stager.

Answer: A

QUESTION 54:

You work as the network technician at Certkiller .com. The Certkiller .com network consists of a single Active Directory domain named Certkiller .com. Certkiller .com consists of a Sales department and a Research department. You have received instructions to create a team collaboration solution for an organization. Certkiller .com wants the team to provide the following profiles for every user:-

- * Information about them
- * A personal site for the user
- * Target information within Certkiller .com to specific users and
- * To conduct surveys on the Certkiller .com services.

Which technologies should you recommend while minimizing any software costs?

- A. Install Microsoft Solution for Internet Business 2.1.
- B. Microsoft Windows SharePoint Services.
- C. Microsoft Commerce Server 2002.
- D. Install Content Management Server 2002 Site Stager.

Answer: B

QUESTION 55:

You work as the network technician at Certkiller .com. The Certkiller .com network consists of a single Active Directory domain named Certkiller .com. You have been contacted by a Certkiller .com customer. Mia Hamm wants you to create an Internet-facing portal solution for an organization that track user purchases made through the portal site. The character of the solution should also purchase products and services and their users need to view and download service and product documentation. There are also users that need to provide personalized content that is targeted to their buying history.

Which technologies should you include? (Choose all that apply.)

- A. Document libraries in SharePoint Portal Server 2003.
- B. Form libraries in SharePoint Portal Server 2003 and shopping cart functionality.
- C. Purchase tracking and shopping cart functionality in Microsoft Commerce Server

2002.

- D. Financial functions in Microsoft Excel 2003 and shopping cart functionality.
- E. Purchase orchestration capabilities in Microsoft BizTalk Server 2004 and Shopping cart functionality.

Answer: A, C

QUESTION 56:

You work as the network technician at Certkiller .com. The Certkiller .com network consists of a single Active Directory domain named Certkiller .com.

Certkiller .com consists of a Sales department and a Research department. You have received instructions to create a business-to-consumer portal solution.

Certkiller .com wants the solution to include Microsoft Content Management Server 2002 (MCMS) and Microsoft Commerce Server 2002.

The users of Certkiller .com must be able to use Content Management Server Web Author and to associate this content with specific products in the catalog.

What technology should you choose?

- A. Implement Microsoft Solution for Internet Business 2.1.
- B. Implement Microsoft BizTalk Server 2004.
- C. Implement Microsoft Solution for Internet Business 2.1.
- D. Implement Content Management Server 2002 Site Stager.

Answer: C

QUESTION 57:

You work as the network technician at Certkiller .com. The Certkiller .com network consists of a single Active Directory domain named Certkiller .com.

Certkiller .com consists of a Sales department and a Finance department. You have received instructions to create a team collaboration solution for an organization.

Certkiller .com wants the team to provide discussion boards in order to collaborate about project-related subjects, sites that are meeting workspaces to assist in organizing meetings, document libraries where other users can store collaborative documents and Conduct surveys on services provided by Certkiller .com.

Which technology should you recommend while minimizing any software costs?

- A. Microsoft Windows SharePoint Services.
- B. Document libraries in SharePoint Portal Server 2003.
- C. Financial functions in Microsoft Excel 2003.
- D. Form libraries in SharePoint Portal Server 2003.

Answer: A

QUESTION 58:

You work as the network technician at Certkiller .com. The Certkiller .com network consists of a single Active Directory domain named Certkiller .com.

Certkiller .com consists of a Sales department and a Finance department. You have received instructions to create a portal solution to support the Finance department.

Certkiller .com wants the solution to target content to employees based on job role, department within the organization and date of hire.

Certkiller .com wants the users to create personal Web sites from which they can access documents, contacts and Web sites related to HR.

Which product should you recommend?

- A. Microsoft Office SharePoint Portal Server 2003.
- B. Document libraries in SharePoint Portal Server 2003.
- C. Microsoft SharePoint Team Services.
- D. Form libraries in SharePoint Portal Server 2003.

Answer: A

QUESTION 59:

You work as the network technician at Certkiller .com. The Certkiller .com network consists of a single Active Directory domain named Certkiller .com.

Certkiller .com consists of a Sales department and a Finance department. You have received instructions to create a portal solution that must integrate information from a variety of computer configurations within Certkiller .com. The configurations of the computers are as follows:

- * Data stored in DB/2 database running on an IBM mainframe
 - * A Web-based application running on Websphere on an IBM mainframe and
 - * A Web-based application running on Apache on a computer running Linux.
- Certkiller .com wants the computers to be accessed by users via the portal solution. Both Internet-based and intranet-based users will access the portal. Certkiller .com wants the users only to provide their credentials once. You implement Advanced database services in Host Integration Server 2005 and Page Viewer Web Part in Microsoft SharePoint Portal Server 2003.

Which technology is still needed?

- A. Single Sign-on feature in Microsoft Exchange Server 2003.
- B. Financial functions in Microsoft Excel 2003.
- C. Single Sign-on feature in Microsoft Windows SharePoint Portal Server 2003.
- D. Form libraries in SharePoint Portal Server 2003.

Answer: C

QUESTION 60:

You work as the network technician at Certkiller .com. The Certkiller .com network consists of a single Active Directory domain named Certkiller .com.

Certkiller .com consists of a Sales department and a Finance department. You have received instructions to create a business-to-business portal solution for an organization and its partners. Certkiller .com only wants authorized users to create, publish, and manage their Web content.

The solution must also act as a document gateway and should support the business-process integration. The integration should consist of the management of data translation, encryption, digital signatures and document-tracking services for different transport mechanisms.

Which portal technologies should you use? (Choose all that apply.)

- A. Implement Microsoft Solution for Internet Business 2.1.
- B. Use Content Management Server 2002 for content management and creation, document exchange, and business-process integration.
- C. Implement Content Management Server 2002 Site Stager.
- D. Use BizTalk Server 2004 for document exchange and business process-integration.
- E. Use Microsoft Solution for Internet Business 2.1 for content management and creation, document exchange, and business-process integration.

Answer: B, D
